

DEV WORKSHOP #1

NASA SUITS

SOURCE CONTROL & COLLABORATION

PART
01

Introduction

What is Source Control?

- A system that tracks and manages changes to a file (system) over time
- Easy to revert to older, working versions
- Can try new things without worrying about breaking older code
- Team members can work on different pieces in parallel
- Most common source control suite is `git`

What is GitHub?

- A cloud infrastructure built around `git`
- Code is `pushed to/pulled` from the cloud
- Can easily manage the project, see history, add team members, etc.
- Team members can review each other's work before merging it

Checkpoint

Do you have git?

1. Open Terminal
2. Run `git --version`
 - a. If you don't have git, run `brew install git`
 - b. Run `git --version` again
3. In your browser, go to <http://www.github.com/>
4. Log in
 - a. If you don't have an account, create one
5. Tell me your GitHub ID

How do we use git/GitHub?

- `clone`: make a copy of a GitHub repository on your computer
- `commit`: save a checkpoint of your work
- `pull`: sync all new changes into your local copy of the repository
- `push`: upload all your changes to the GitHub repository
- `checkout`: make/switch `branches` to avoid overwriting each other's work
- Pull Request (PR): notify teammates to check your work before merging

Demo

PART
03

Exercise

Exercise

Make your first PR

1. Clone the RISDxNASA-SUITS/2026-workshop-1 repo from GitHub
2. Make and checkout a branch with your own name
3. Publish your new branch
 - a. If you needed to install git and/or didn't have a GitHub account, please call me over
4. Edit hello.txt to introduce yourself
5. Commit the updated hello.txt
6. Push the changes to your new branch
 - a. **NEVER PUSH TO `main` BRANCH**
7. Go to GitHub, make a pull request, and mark me as the reviewer
